WE ARE LEBO

Experience since 1871

Since 1871 we „build“ doors. Since our foundation over 150 years ago things have changed a lot, but our enthusiasm for high-quality door craft and first-class service has remained until today. And it does not just grow with every day, but with every door that leaves our factory. For ensuring highest precision in the serial production, modern technology is indispensable, however machines cannot replace our craft. At many doors we once again put our hands in order to perfect the result.

Sustainable & healthy

Like no other building material, wood provides the direct feel of nature! This is probably why we love to live surrounded by wood. Measures adopted to protect and maintain the unique resource of our woodlands are therefore becoming increasingly important. Because we take this responsibility very seriously, a gentle and sustainable way of dealing with wood and wooden materials is firmly built into our principles for working. Beside to the variety of our range, LEBO attaches special importance to the use of environmentally friendly materials.

LACQUER COLLECTION

Smooth door, White Lacquer 9016, single leaf

Real design classics

The lacquered doors from LEBO bring restrained elegance into your living room. Their timeless designs harmonise equally well with modern and classic furnishing styles.

With their easy-care surfaces and varied light openings, you can use our products to create personalised rooms in your own style! Thanks to the wide range of designs, impressive handles and fittings you can fulfil all your wishes about the way you want to live at home!

Varied and hard-wearing

LEBOLIT (CPL) is a multi-layered laminate, made of decor papers which have been impregnated with melamine resin, artificial resin or protective lacquers. Its construction is comparable with that of laminate floors and kitchen worktop surfaces and it is therefore ideally suited to areas which undergo a lot of hard wear.

LEBOLIT doors from LEBO suit every style of living thanks to our great range of decors and colours. Discover it for yourself!

DECORATIVE CPL DOORS

Smooth door set, Lebolit PREMIUM Oak Nordic, single leaf, frame RR, hinges V4426 WF

NATURAL VENEER DOORS

Inimitably authentic and cosy

Do you like to surround yourself in your home with natural materials and high quality surfaces and are also concerned to know where they came from? Then we are happy to recommend to you our real wood veneer collection!

Wood is a healthy material in the sense that it has many health-promoting properties, People with allergies, for example, benefit from the fact that wood is not electrostatically charged and therefore does not attract allergens such as dust.

Timelessly bright and elegant

LEBO's glass doors let the light stream through your rooms. Available in both simple and decorated glass, these products stand, more than virtually any other products, for a modern and straight-lined style of living.

The light makes your rooms feel pleasant and friendly. It makes living areas seem more spacious. It makes big rooms seem even more impressive. Of course you will also find sliding doors in our glass door range.

MODERN GLASS DOORS

Full-glass door Luana 1 matt, hinges „Office“, lock „Studio“, frame RR, White Lacquer 9010

WOOD-GLASS DOORS

Lightline 1, Lebolit PREMIUM Aland Pine Polar, LO lock-sided, clear glass, double leaf, frame RR, hinges V4426 WF

Expertly combined materials

The decorative wood-glass doors from LEBO combine the timeless brightness of glass with the pronounced variety of designs of wood doors.

You can therefore combine wooden decorations with attractive light openings and glass surfaces. Whether you choose, transparent or satinised finishes, or light openings with trellis frames: our wood-glass doors suit modern, country and conventional living styles.

ROOTS

Living with natural materials

Nothing in life is perfect. Restrained colours, rugged elegance and a natural ambience. Wood as the central element of furniture. Authentic and conscious of its own roots.

Do you love living in a natural way? Then take a look at our doors in the authentic Roots style!

Varied and hard-wearing

LEBOLIT (CPL) is a multi-layered laminate, made of decor papers which have been impregnated with melamine resin, artificial resin or protective lacquers. Its construction is comparable with that of laminate floors and kitchen worktop surfaces and it is therefore ideally suited to areas which undergo a lot of hard wear.

Smooth door set, Knotty Oak matt, frame EE, hinges V4426 WF

Real wood veneer doors

Knotty Oak matt

Wild Oak Cross matt

White Oak matt

Wild Oak matt

Real wood veneer

To manufacture the LEBO veneer doors we use only selected simple or beautifully combined fine wood veneers. Wood is a naturally growing material. This means that veneer strips can vary in colour, structure and consistency. There may even be variations within a single veneer strip. These natural characteristics make our products authentic and mean that each element of the door is a unique object in itself.

QUIRIN / LISTELLO

Listello White Oak matt

Exciting!

With the “Quirin” series, we would like to show you how exciting it can be to combine veneer effects in both vertical and horizontal way.

Listello is redefining cross grains: Narrow strap-like crossing veneer strips create a unique look with a natural touch. Lebo matt lacquer adds the final touch, transforming a simple door into a striking head-turner.

Detail of Quirin Veneer

Traditional

The highest demands for quality can still be made on classic and timeless designs! The Elegance series of highly stylish doors provides real wood surfaces veneered on frames with solid wood battens (Elegance 1 & 2) or real wood fields (Elegance 15). Light openings, even when they are used in combination with trellis frames, let additional light into our rooms and brighten up the atmosphere for living!

VINTAGE

Timelessly luxurious living

A tranquil and harmonious ambience. Bright, cheerful colours. Accessories made with attention to detail and thoughtfully combined elements. Collected, used and new. Creatively installed with individual charm.

Is this playful country house style your dream design? Then make it come true with our vintage-style doors!

Country house style

Whether you dream of living in a country cottage or in a town house villa, the Arto series brings your dreams a little closer to becoming a reality! Three coats of lacquer, fine milling and the use of a wide range of glazing does not mean that the price has to be out of reach!

CLASSIC

Classic 32, lacquering according to RAL 240 8010, single leaf, frame EE incl. V-joint, hinges V4426 WF

Sleek design

A simple design with clear lines and high quality workmanship make the Classic series stand out! In contrast to a door which consists of two or more parts, the subdivisions here are milled. This guarantees increased stability as well as preventing an uneven formation of joints.

The surface quality is guaranteed by applying several coats of lacquer with sanding between each coat. We have many models with light openings - so just select out of our glazing range to let additional light into your rooms.

With its squared jamb, squared 60 mm-wide architrave and a V-joint, the frame offers a top-quality lacquered finish. It's also easy to install and fits perfectly to your new Classic door.

Our recommendation

frame EE with V-joint

Lucia PIATTA S smart2lock

High-quality look

This classic design combines timeless elegance with a very attractive look. The Cottage series is distinguished by its combination of inserted frames and its millings. The multi-layer lacquering creates a really impressive surface quality. Incidentally, a double-leaf door is not just a valuable eye-catcher but also provides an excellent solution for wall openings which are not of the normal size as the door leaves can be chosen in different sizes.

Country-style, relaxed and timeless

Both country in style and pleasant, while both elegant and timeless too, the Country series is, thanks to its many different models, extremely versatile and allows you many possible design variations. You can therefore realise your own particular vision with a large range of subdivisions and glass options to choose from. The lacquer is applied by hand with sanding between each coat and the particular depth of the milling creates a striking effect.

Looking for more light?

The addition of a light opening does not just add value to the door, but the use of glass also allows more light into your rooms to really brighten up your home. The glazing beads are even flush in the doors of the Country series. You can find many of our different types of glass from page 166 onwards.

Trellis frame?

Trellis frames are a decorative element which can add a certain flair to larger light openings.

CHELLO

Chello 40, White Lacquer 9010, single leaf, 2 LO with Satinato glass

Elegance and quality for a great price

The Chello series impresses with its classic design which is nevertheless timeless. Although this series is in the mid-price range, it has a superb appearance which exudes elegance and quality. This is achieved by applying several coats of lacquer and the milling creating a three-dimensional effect.

PURE

Live in the here and now

Contemporary living with clear lines. Reduced to the most essential. Puristic and straight-lined ambience with interesting colour accents. High demands on living designs and materials.

Do you like to live in a contemporary style? Then you need your doors in a modern and pure style!

A touch of colour

In addition to the design and the technical features, flawless lacquering is one of the most important aspects when buying new doors.

It needs to be robust and abrasion-resistant, environmentally friendly and odourless while also suiting the customer's taste. Namely, the colour should match the latest colour trends for window frames, sockets and light switches.

Lacquer according to RAL/NCS

Depending on the door model, the structure of our lacquer is different and sometimes quite complex. Not only are different lacquers used, but also different technologies apply them, which combined make a door finish perfect.

Price differences at LEBO therefore not only result from the often detailed doors, but also from their high-quality workmanship.

And as this topic is very important in your price comparison and also is our passion, we would be happy to exSmooth the details to you.

*“Our surfaces look so good,
you want to touch them.”*

Roller-lacquering process

In our roller-lacquering system, after the primer, the top coat (hydro/water-based lacquer) is efficiently applied to the door leafs using rotating rollers.

Roller/spray lacquering process

In our roller/spray lacquering process, after the primer, the top coat (hydro/water-based lacquer) is applied using different methods. Rotating rollers efficiently apply the first layer of lacquer to the door leafs. This is followed by additional lacquer application using modern robots.

Spray-lacquering process

In our spray-lacquering process, after priming, the top coat (hydro/water-based lacquer) is applied exclusively using modern robots in the desired surface colour. The paint is finely atomised, ensuring it gets into even the smallest of pores. The result is a pleasantly smooth and gentle surface with a elegant touch of gloss that is both extremely hard-wearing and abrasion-resistant. Our quality and the according price differences result from the number of spraying runs on our cutting-edge machines.

Manual lacquering

Effect lacquers such as ‘Mixture’ or lacquering according to RAL/NCS are applied manually as standard at LEBO. More delicate models also receive this high-quality manual finish. In a separate spray booth, a 2-component lacquer with a perfectly matched mixing ratio of hardener and paint is applied over the entire surface of the door leaf using a spray gun. The intermediate sanding is done by hand to ensure perfect absorption and adhesion of the top coat. In addition to reducing overspray, the result is a visibly smooth, flawless finish.

Ask your LEBO dealer about more variants.

MIXTURE

Mixture Anthracite, single leaf, Alu metallised frame RR

Metal look

Your coloured lacquer door is given a particularly special and modern additional finish in the Mixture collection: small glitter particles give the surface a restrained iridescent sheen and metallic look, which perfectly reflects the modern lifestyle, both in combination with an aluminium frame as well as with a matching lacquered frame.

SLIDING-DOOR SYSTEMS

Wooden sliding-door system 2011 running in front of the wall, handle bar, Luana 1 White Lacquer 9010

Get more space!

Creating more space and the maximum use of this space are becoming increasingly important for us. This is why sliding doors which either “disappear into the wall” or run along in front of it provide an obvious solution!

The use of sliding doors becomes even more attractive if you can find the right one to suit your personal taste from our wide range of models and styles. Of course sliding doors also simply invite the use of glass! Look at the examples of Luana on the right. Nice, isn't it?

Harmonious combination

The benefits of this system lie in the fact that it can be retrospectively integrated into any room architecture, even without extensive conversion work and independently of the ceiling construction. This system can also be used for combinations of wood and glass and is available with a soft closing on both sides.

FIT

FIT sliding-door system, surface Lebolit PREMIUM Bog Oak Cross, handle bar squared

POCKET SLIDING- DOOR SYSTEM

Pocket sliding-door system, Lebolit PREMIUM Oak Knotty

Pocket sliding doors

Sliding doors to be installed inside the wall must be planned well in advance because it is very difficult to incorporate them into a house once it has been built. This is because the sliding rails must run inside the wall. You should also bear in mind that a sliding door inside the wall and including handle bar will also slightly reduce the width of the passage way because the leaf will remain in the opening when it is open. A door leaf with trip handle can be slided into the wall completely.

Optional extras

		
Strips	Light opening	Full-glass door

Scan me!

Wall-mounted sliding door

Sliding doors which run in front of the wall remain visible and can become a prominent design element in the room. Their great advantage is their possible, sustainable integration into the room.

Sliding doors can be used above all to close up wall openings while saving space at the same time. They can be used equally well in modern buildings as when renovating older buildings.

Your LEBO dealer will advise you on site and give you some important tips on the choice of your LEBO door as well as on its proper installation.

Screen printing

Enamel colours are applied to the properly prepared float glass and are then burnt into the the glass surface using the final "pre-loading" process. (The float glass becomes a single pane of tempered safety glass.) This creates a scratch-resistant and UV-resistant coating.

Note: This is a translucent surface and therefore not opaque.

Our recommendation

			
Frame: RR	Hinge: 3-parted Fabrico	Lock: Fabrico PZ	Handle: Fabrico L-shape

Function and usability – a quick guide:

Fire protection

Fire doors prevent the spread of fire, ensure escape routes in case of fire and facilitate the rescue of people and values.

Smoke protection

Smoke protection doors protect people from the life-threatening effects of smoke. During a fire they prevent choking caused by the depletion of oxygen.

Soundproofing

For well-being good sound insulation is important. Soundproof doors from LEBO keep the noise out for more peace and a higher quality of life.

Burglar-resistance

Burglar resistant doors can withstand attempted break-ins using physical force for extended periods of time. They protect material and intellectual property against theft and robbery.

Climatical stress

Climate protection doors prevent warping / bending of a door leaf due to different climatic conditions (air humidity, temperature) of the rooms connected by them.

Radiation protection

Radiation protection elements prevent hazardous radiation from penetrating the door. (E.g. x-ray beams in doctor's offices/hospitals).

Mechanical stress resistance

LEBO functional doors can handle the highest levels of mechanical stress and are available in the stress groups S and E.

KiTa doors

The KiTa edge with optional finger protection minimises the risk of injury from sharp edges/corners, rough surfaces and protruding parts.

Damp-room protection

Damp-room doors are used in areas in which the air humidity can easily be increased or where there are water sprays (e.g. In bathrooms without ventilation).

Wet room doors

Wet room doors can be exposed to water for extended periods, or high humidity for limited periods, without sustaining any damage.

Bullet-resistant doors

Bullet-resistant doors offer safe protection. They are capable of stopping projectiles, saving lives in the process.

Scan here and have a look at our flyer for functional doors

FUNCTIONAL DOORS

Robust & resistant

No matter whether new construction or refurbishment / modernisation, LEBO offers the right door for every area of the house. Whether burglar-resistant doors for the apartment, cellar or garage entrance, fire-retardant doors for the boiler room or soundproof doors for more peace. Functional doors from LEBO make sure that you feel well and safe in your home.

Even in properties where building codes or health regulations dictate the use of these special doors, functional doors from LEBO are the perfect choice. Construction and material are strictly controlled and tested and thanks to the variety of design options, they combine safe technology and outstanding design.

FULL-FLUSH AND FLUSH-OPTIC

Smooth door set, Lacquering according to RAL 7016, single leaf, full-flush door set

The frame surrounds the door and is firmly attached to the wall surrounding the door. It is used to secure the door leaf in place. This is performed using the hinges attached to the frame and to the door leaf. Frames are available in a wide range of visual and functional designs. According to the combination of frame and door leaf used, doors can be described as being either “full-flush” or “flush-optic” doors.

Full-flush doors

In full-flush doors, the door leaf and the frame are flush. These are particularly effective in very modern rooms.

Flush - The door leaf is flush and in its external appearance it is on the same level as the sealing level.

Use Tectus-hinges TE 340 or Euro-hinge 3D

Flush-optic doors

The door leaf is rebated. Seen from the opening side, however, it looks like a full-flush door. From the closing side, you can see a shadow gap running around it. A normal frame can be used for this model. This element is available with the standard surface variety.

Flush-optic - The door leaf is rebated and closes flush with the frame.

Use Tectus-hinges TE 240

Important note

In full-flush and flush-optic door sets, the door surface does not close completely flush with the architrave of the door frame.

Reverse closed

When closed, the reverse opening door set scores highly with its flush-to-frame optic and clear, uniform structure in the living space. This means that the reverse opening door set can be optimally combined with other full-flush or flush-optic door sets from Lebo

Reverse opened

The functionality of the reverse-opening frame is truly highlighted when it is open. The opening direction into the wall reveal, i.e. opening into the room, means that the door set can be used ideally where space does not allow for the installation of conventional elements.

Ask your LEBO dealer about more variants.

Note: The opening direction is always determined by the side featuring the decorative architrave for Reverse door-sets.

DIN Left door set

DIN Right door set

REVERSE DOOR-SET

A photograph of a white reverse door set. The door is open, revealing the interior of the door and the frame. The door has a simple, clean design with a silver handle and a lock. The frame is also white and fits snugly into the wall. The background is a plain, light grey wall, and the floor is a dark grey tile. The lighting is soft and even, highlighting the smooth finish of the door and frame.

Reverse door set, White Lacquer 9016

DÜSSELDORF

Series Düsseldorf, flush, Lacquering according to RAL 9010, aluminium frame TCS

Frameless beauty

For lovers of modern and clean design, we have developed the series Düsseldorf. Besides the very clear expression of forms, this series convinces with a very well thought-out construction: wall and door leaf attach to each other by appearing flush, while the construction of the frame stays invisible.

For the complete look, the skirting board can also be attached flush to the wall.

The result is a high-quality element which fits perfectly into contemporary surroundings with a focus on select materials

The advantages of the Series Düsseldorf:

- High-quality materials
- Flush design
- Invisible frame construction
- Optional flush skirting board
- Clear design

Multi-layer me-
chanical coating

TCS 45 & TCT

Define the opening direction

Lebo offers two individual systems for deciding on which side the door leaf shall be flush to the wall.

With the TCS 45 system the door opens inwards, limiting the opening degree to 90°, while with the TCT system the door opens outwards.

As both systems have the same look when closed, it is easy to combine them depending on your room situation or requirements.

For system **TCS 45** the door leaf is rebated to the frame and opens outwards. The door leaf has a thickness of 45mm with a solid chipboard core, optionally with upright stabiliser. Maximum nominal door size is 1100mm in width and 2500mm in height. The door leaf is available in Lebolit CPL, wood veneer, white and colour lacquers. All edges are squared. We also recommend a door opening limiter.

For system **TCT** the door leaf is unrebated and opens inwards. The door leaf has a thickness of 45mm with a solid chipboard core, optionally with upright stabiliser. Maximum nominal door size is 1100mm in width and 2500mm in height. The door leaf is available in Lebolit CPL, wood veneer, white and colour lacquers. Edges are unrebated / flush.

Skirting boards

Flush to the wall and matching the door

For both systems, TCS 45 and TCT, we offer the skirting board systems Light 46 for wooden skirtings and C70 for tiles. Both skirting board systems are available for solid and dry wall constructions.

Note: Skirtings are to be provided by the customer.

Focusing on the essentials

We want to follow the trend towards new simplicity in our designs – focusing on the essential and functional, without losing the sense of aesthetics. This ambition has led us to develop the Aalto series. It offers a product solution that meets all the requirements of modern design. There are absolutely no drill holes, meaning no other devices is necessary. Use of the magnetic closure and an adhesive handle does not require any extra machining of the glass. The opening direction and hinge-sided remain flexible as a result. (Distinction of the door leaf between right-hung and left-hung no longer necessary)

The advantages of the series Aalto:

- As the door leaf, frame and hinges lie in one plane, the Aalto series forms a perfect partner for our other flush door sets
- The stylish handle and the minimalistic hinges integrate far more harmoniously into the door set than conventional solutions.
- The closing magnet and magnet plate on the door enable non-contact and noiseless closing.

VARIOFIX

made by **HÖRMANN**

Variable & robust

LEBO has added interior door solutions to its portfolio with the VarioFix steel frame. Easy to install like a wooden frame with foaming, LEBO offers an alternative to wooden frames that kills two birds with one stone with the high resilience of a steel frame. The VarioFix is also highly variable. It can withstand for wall tolerances of up to 20 millimetres and be installed retroactively without any issues. The VarioFix frame is a true all-rounder and the perfect solution for daycare centres, office buildings, schools and all other buildings in need of robust frames

Scan me!

One room, three possibilities

Storey-high, sidelights and top lights door elements are particularly good for creating the illusion of more space and, in combination with glass sidelights or a top light, they allow significantly more light into the room.

Benefit from brighter, seemingly bigger spaces, especially in entry ways or hallways with minimal space.

STEEL-LOFT

made by **HÖRMANN**

Steel-Loft doors

Industrial style for living and working spaces. Are you a fan of timeless elegance and modern minimalism? Look no further than our Loft doors! Harmonise your interior design with steel and glass. The Loft doors are available in an element size up to 5000 x 4000 mm! Even in this size, the doors remain impressively elegant thanks to their narrow profile of 76 mm (door) and 20 mm (fixed glazing) and the attached trellis.

The doors are available with angular or slim glass retainer strips. Select from deep black RAL 9005 or stainless steel for the door fitting.

Angular glass retainer strip

Slim glass retainer strip

More information can be found in the flyer on our Steel-Loft doors

TECHNICAL & ACCESSORIES

THE DOOR

Basic facts from A to Z

1 Door leaf edges

Door leaf – squared

Door leaf – round (PF)

Door leaf – round (PK2)

2 Surface

The surface is the visible outer side of the door leaf and is made of real lacquer, Lebolit, Natural veneer, Lebodur, Lebosense or glass.

3 Lock & locking plate

Available options: Warded lock (BB), profile cylinder lock (PZ) and WC lock. You can find images of all three types on page 165. The locking plate on the frame forms the right counterpart to the lock.

4 Core

Tubular chipboard strips (REE)

Tubular chipboard (RSP)

Honeycomb

Solid chipboard (VSP)

5 Wooden frame

This is the fixed part of a door set, into which the moving part, the door leaf, fits. It is also used as the base for the hinges which connect the door leaf to the frame. You can find out about our different types of frames on pages 138-139.

6 Storey-high, sidelights & top lights

Storey-high doors go up to the ceiling. Door sets with sidelights or top lights enhance the frames. You can find more information about these on pages 158-159.

7 Door closers

Our door closers automatically close our swing doors in a controlled manner after they have been opened.

8 DIN left / DIN right

The opening/closing direction of the door.

DIN right

DIN left

9 Hinges

The hinges connect the frame to the door. They allow the door to swing and enable door installation and removal – see page 165.

10 Ventilation grilles

Our ventilation grilles are used for the ventilation of and extraction of air from rooms, which do not have their own windows or ventilation systems or are subjected to high levels of air humidity.

11 Drop seal

To prevent the unhindered travel of sound waves and air currents between the floor and the door, we recommend the use of our integrated drop seal. It also helps save heating costs!

12 Wide-angle spy

You can prevent the entry of unwanted visitors into your rooms using our spy. Using our wide-angle spy, you can see who is at the door without having to open it.

13 Handle

The handle is one of the basic design components of the door. The design of the handle should match the style of the door set and the hinges.

You can find explanations of even more of our specialist terms here!

FRAMES

The frame forms the framework of a door, so you should make sure you match the frame to the door leaf when choosing a door. At LEBO, you can also get the door leaf and frame for your ideal door in a flush finish or flush-edged design (see pages 136 – 137 in our catalogue). As standard, our doors and frames are delivered in a rebated version as shown here.

EE (squared squared)

Our classic with squared jambs and squared, 60mm architrave.

RR (rounded rounded)

Our top seller with rounded jambs and rounded, 60mm architrave.

RR80 (rounded rounded)

Rounded jambs and rounded architrave with 80mm architrave width. Ideal for renovations.

EE & RR with V-joint

Our EE and RR frames are also available with a V-joint. Special features:

- spray-lacquering
- installation-friendly
- visually accentuated mitre

EED (squared squared continuous)

Upright continuous longitudinal fields and 60 mm architrave give a special look. (The cross architrave is flush with the upright architrave. The veneer edge of the cross architrave is lacquered).

RRD (rounded rounded continuous)

Upright continuous longitudinal fields and 60 mm architrave give a special look. (The cross architrave is flush with the upright architrave. The veneer edge of the cross architrave is lacquered).

RP17 (rounded profiled)

With a width of 80 mm and a milling of 20 mm the RP17 offers a special frame for our White Lacquer classics. But also Smooth door leaves in white Lacquer can be revalued by this frame type.

RE (rounded squared)

This white frame has a simple appearance (with a rounded jamb and a 60 mm architrave with a small 2 mm radius).

RP09 (rounded profiled)

An elegant classic in white for classic door models, with a strikingly profiled 65 mm wide architrave.

RRA (rounded rounded folding)

Rounded jamb and rounded architrave, 72 mm width and 25 mm folding. Ideal for deeper skirtings.

Reverse

The white, reverse-opening element with the R80/R60 architrave stands out with its flushness and inward opening. This frame enables a flush fit in narrow corridors without the doors opening into and obstructing the corridor.

COMFORT CLOSE

Comfort Close is the ideal addition to interior doors with a modern look: the locking system keeps the door leaf closed by a magnet.

Closing magnet

Magnetic plate

Full-glass door

The advantages of Comfort Close:

- Contact- and noiseless open and close
- Maintenance-free system
- The holding force is individually adjustable, reliable and durable.
- Simple and comfortable handling: the door leaf is closed by the magnetic contact.

This fits:

- Besides our smooth doors, our modern style & design doors combine particularly well with this system.
- Select from a variety of fittings to screw or glue-on.

Important note

Comfort Close is available for all our full-flush and flush-optic door sets (see pages 136 -137) in available surfaces.

ACTIVE STOP

A really helpful feature for everyday life! Concealed and thus an „invisible“ helper, which on top of that is absolutely maintenance-free. For soft closing and secure holding of the door in the desired position.

Active stop

Opening angle / holding position configurable

Damping and freewheel:

- Damping and closing from 25°: The closing door is gently braked from an angle of 25° and automatically latched
- Freewheel movement between 25° and 60°: In this range, GEZE Active Stop lets your door move freely. And no matter how much momentum the door has – damping reliably and safely kicks in at 25° when closing and at 60° when opening.
- Damping and holding open up to 140°: From an angle of 60°, the opening door is gently braked and automatically opened up to the individually adjustable holding angle of max. 140°.

Opening angle and holding position:

- Variable holding position between 80° and 140°
The desired opening angle is also the holding position and can be variably adjusted between 80° and 140°

The advantages of Active Stop:

- Soft stopping: when opening, the momentum is slowed down and then stops the door in the desired position. This prevents damage to the wall and furniture.
- Easy to keep open: the opening angle can be configured individually so the closing of the door is prevented – a door stopper is not necessary any more!
- Silent closing: through active damping, the door closes slowly and quietly. Loud slamming and door damages are avoided – additionally minimizing the risk of injuries

Important note

Active Stop is available for all full-flush and rebated wooden door sets. For an optimised functionality we recommend at least the tubular-chipboard core (RSP). Active Stop cannot be combined with a drop seal, as the damping technology, which softly stops the door and then automatically closes it, is impaired.

SMART2LOCK

The handle that handles both

INNOVATIVE LOCKING TECHNOLOGY

smart2lock stands for the perfect combination of intelligent locking technology with puristic design. All door handles can be locked and unlocked with just one hand. And since the locking mechanism is integrated in the handle, no key rosette is required.

More tips and dimension tables for full-flush and our flush-optic door elements are available in our technical manual on www.lebo.de/en.

EE / RR / RE / EED / RRD / RR80 / RRA = -2 / +17 mm adjustment

RP17 / RP09 = -0 / +19 mm adjustment

Satisfied?

Let us know!

We are satisfied, if you are! And if you do not know how to deal with your newfound pleasure about your new LEBO doors, we also have a tip for you:

Tell your family and your friends about us or leave a rating or nice comment on Facebook, Instagram, etc. We would greatly appreciate! If you are not satisfied with us, we will work hard to make you smile again. Then please get in touch with your LEBO dealer where you bought our doors and describe him your problem.
